```
chromosome II of Rhodobacter sphaeroides (Choudhary et al., 1994, Journal of Bacteriology, 176:7694-7702). The cosmids were then digested with a variety of restriction enzymes (BamHI, EcoRI, BqIII, PStI, ECORV, NoII and DNASEI) and restriction fragments subcloned into the respective multiple cloning site sites of pBluescript SK (-). Note BgIII fragments were subcloned into the pBluescript bamHI site. DNASEI fragments were subcloned into the EcoRV site. All subclones were transformed into E. coll XIIBlue MRF'. All fragments were then sequenced and the sequences where possible were assembled using the GCG program GELASSEMBLE.
